ABSTRACT:

PURPOSE: To obtain a stable and easily takable syrup pharmaceutical having improved emulsion stability of an oil component by adding a specific surfactant and a water-soluble polyhydric alcohol to a syrup pharmaceutical compounded with an oil component to mitigate the bitter taste of a pharmaceutical agent and improve the taste of the pharmaceutical.

CONSTITUTION: The objective syrup pharmaceutical having the above effects is composed of (A) a pharmaceutical agent, (B) an oil component (preferably a medium-chain triglyceride), (C) one or more kinds of surfactant selected from polyhydric alcohol higher fatty acid ester, polyoxyethylene adduct of polyhydric alcohol higher fatty acid ester, sucrose fatty acid ester, polyoxyethylene adduct of a higher alcohol, polyglycerol fatty acid ester and polyoxyethylene adduct of hardened castor oil and (D) a water-soluble polyhydric alcohol. Preferably, the ratio of the medium-chain fatty acid

triglyceride to the syrup pharmaceutical is 10-20W/V% and the weight ratio of the component D to the component C is 50:50 to 5:95.
